

## 10.12.8 Deploying OpenClinica within Tomcat

1. The current directory on your system should be `/usr/local/oc/install`. If it is not, make it the current directory by running:

```
cd /usr/local/oc/install
```

2. Run the following commands. In the commands, `v.x` is your version of OpenClinica, e.g. 3.1:

```
unzip OpenClinica-v.x*  
cd OpenClinica-v.x*/distribution  
unzip OpenClinica.war -d OpenClinica  
cp -rf OpenClinica* /usr/local/tomcat/webapps  
rm -f /usr/local/tomcat/webapps/OpenClinica.war
```

OpenClinica is now deployed for use with the database.
