

# 17 Release Notes - OpenClinica 3.2

OpenClinica 3.2 provides Subject Casebooks for archival purposes with full audit history and Discrepancy Note information. OpenClinica 3.2 also supports more REST APIs for getting and filtering clinical data, updated stack requirements and has vastly improved automated test coverage (almost entirely automated).

Click [here](#) for the complete change log.

## New

### Feature

[Printable Subject Casebooks](#)

[Stack upgrade \(updated version of Tomcat and JavaJDK\)](#)

[Excel download of Audit logs](#)

[Performance enhancements for Extract Data](#)

### Description

Print full Subject Casebooks including all provenance data (full audit trails and discrepancy notes).

OpenClinica 3.2 can now run on Tomcat 7 and Java 7 (Tomcat 6 and Java 6 are still supported).

Download the audit log to excel from the audit log window.

Adding indecises has greatly improved performance of extracts (~ 4 - 10x faster based on test results).

## Changes and Fixes

### Feature

[i18n enhancements and fixes](#)

[Add ordinal \(occurrence\) to discrepancy note download to CSV](#)

[Fixes to web services](#)

### Description

Download of Notes & Discrepancies to Excel now contains ordinals for repeating Events and items in a grid.

## Removed

### Feature

Support for Oracle (OpenClinica will no longer be supported on an Oracle database)

### Description
