A read-only version of the previously published study design displays:

Though no changes can be made to this version of the study, you can:

- View form and event settings
- Download form versions,
- Preview forms

etc. The header clearly indicates this is a read-only version, and includes a link to quickly access the current version of the study, which is fully editable. **Note:** *Some Form attributes (checklists, tags, and labels) show the values that they have in the current design, regardless of their state in the previously published version. In the **Test** environment, if a Form version was overwritten after a previous publication, only the newest version of that Form is available for preview and download. This is not a concern in the **Production** environment, since Form versions cannot be overwritten.*

Approved for publication by Kerry Tamm. Signed on 2021-01-19 11:37AM

Not valid unless obtained from the OpenClinica document management system on the day of use.
