

19.2 Study Runner

When users are entering data for testing or real world data collection, users will access OpenClinica via Study Runner. Study Runner is made up of many other pages such as the Participant Matrix, Queries Table, Data Review Tables, in addition to all Participant Details Pages and data. To access Study Runner the first step is to publish a study. Usually, studies will be published to **TEST** first . In addition to letting you use Study Runner features, publishing to **Test** generates OIDs that can be used for edit checks. To learn more about publishing to test and accessing study runner review section [5.1 Publishing Your Study](#). The following sections make up OpenClinica's Study Runner environment.
