

15.5.3.2 View the Study Metadata File to Determine OIDs

If you are familiar with XML file structure, you can determine OIDs using the Study metadata file:

1. Download the Study metadata file: Select Tasks > View Study, then follow the instructions at the top of the page.
2. Open the Study metadata file in a browser or text editor.

Following is an excerpt of a Study metadata file that provides an example of the structure, showing only the tags that are relevant to finding and determining OIDs needed for the data import file. Comments `<!-- ... -->` indicate where the OID values are. You can download and view the complete Study metadata file for the example Study.

Starting with the `<Protocol>` tag, the general structure is that the OID for an element is defined in a `<...Ref>` tag. After that, a `<...Def>` tag for the element contains tags that define the OIDs for the subelements, and so on, through the hierarchy. The hierarchy is: Study Event Definition > Form (CRF) > Item Group > Item.

```
<?xml version ...?>
```

```
<ODM ... >
```

```
<Study OID="YourStudyOID"> <!-- Get the Study OID here. -->
```

```
