

1.2.2 What the Study Audit Log Tracks

The Audit Log tracks the following for Events:

- Date and time
- Location
- Status
- Date started

This table lists the actions the Audit Log tracks:

What	Actions
CRF	Initial data entry complete
CRF	Initial data entry completed with password
CRF	Double data entry complete
CRF	Double data entry completed with password
CRF	Marked complete
CRF	Completed with password
CRF	Properties changed
CRF	Source data verification status changed
Item on CRF	Data value updated (see Note, below the table)
Item on CRF	Data status changed
Item on CRF	Data deleted
Item on CRF	Data inserted for repeating row
Event	Scheduled
Event	Data entry started
Event	Completed
Event	Stopped
Event	Skipped
Event	Locked
Event	Removed
Event	Start date changed
Event	End date changed
Event	Location changed
Event	Signed
Study Subject Created	
Study Subject Status changed	
Study Subject Value changed	
Subject	Created
Subject	Status changed
Subject	Value changed
Subject	Global value changed

Subject	Site assignment made
Subject	Group assignment made
Subject	Group changed

Note: Starting with the OpenClinica 3.1.2 release, initial values for CRF Items provided during data entry are tracked in the Audit Logs, and reported as "Item data value updated." This is only tracked when a value is provided; empty or non-existent values are not tracked. Prior to the OpenClinica 3.1.2 release, initial values for CRF items were not tracked.

The Audit Log does not track Discrepancy Notes, but you can view or download the full thread for any Discrepancy Notes you want to see. Discrepancy Notes cannot be removed, so they are all always available.
