

10.12.8 Deploying OpenClinica within Tomcat

1. The current directory on your system should be /usr/local/oc/install. If it is not, make it the current directory by running:

cd /usr/local/oc/install

2. Run the following commands. In the commands, v.x is your version of OpenClinica, e.g. 3.1:

unzip OpenClinica-v.x*
cd OpenClinica-v.x*/distribution
unzip OpenClinica.war -d OpenClinica
cp -rf OpenClinica* /usr/local/tomcat/webapps
rm -f /usr/local/tomcat/webapps/OpenClinica.war

OpenClinica is now deployed for use with the database.
