

10.12.17 Verify Access to OpenClinica Web Services

At this point, Java, Tomcat, PostgreSQL, and OpenClinica and OpenClinica Web Services are installed and set up. Restart the system by running:

```
reboot
```

After the system starts up, access OpenClinica Web Services at the following URL:

```
http://localhost:8080/OpenClinica-ws
```

The **Welcome** page should display.

To verify your set-up, try to access OpenClinica Web Services from another computer by running the same command from that computer, but replace localhost with the server's IP or hostname.
