## OpenClinica

## **10.13.11 Configure the OpenClinica Application**

If you followed all the previous instructions exactly, there is only one property in the configuration file, <u>datainfo.properties</u>, that you may need to change in order for OpenClinica to start. There are other properties in the configuration file you will probably want to modify for your system, however.

- 1. Using WordPad, open the configuration file: c:octomcatwebappsOpenClinicaWEB-INFclassesdatainfo.properties
- 2. Edit values for the properties in the datainfo.properties file. You must change the value for dbPass to the password you selected in <u>Set Up the PostgreSQL Database</u>. Change the values for any other properties.

The datainfo.properties file for Windows is the same as for Linuxsee more information at <u>Description of datainfo.properties File</u>.

- 3. When you finish making changes, save the file.
- 4. You may also need to configure OpenClinica for internationalization should you wish to utilize OpenClinica in different languages. Also, if you need to use some UTF-8 characters in your application, you may need to modify your default connecter configuration. For more information regarding configuring OpenClinica for internationalization and using UTF-8 characters, please refer
