

2.3 Module Management

You can activate modules to add specific functionality to your study. Available modules are displayed on the **Modules** screen with a brief description of what each does. Click **Learn More** on any of the module cards for more information on a specific module.

To Activate Modules:

1. Click the **Settings**  icon on the **My Studies** screen, **Design** screen, or **Share** screen.
2. Determine which module(s) you would like to activate and click the **Learn More** link to read about the module before requesting access.
3. Click **Request Access** to begin the activation process.

The screenshot shows the 'Modules' tab in the OpenClinica interface. It displays five module cards, each with a title, description, illustration, and a 'Request Access' button. The 'Unite - EHR Integration' card describes pulling medical data from third-party sources. The 'Participate' card describes real-time data capture and audit trails. The 'Insight' card describes visual reporting of data. The 'Randomize' card describes randomizing subjects within a study. The 'eConsent' card describes enabling patients to use their own devices for consent. A 'Request Access' button is highlighted in orange on the 'Participate' card. A question mark icon is visible in the bottom right corner of the screenshot.

Once you request access, the OpenClinica team will enable the module after confirming it is included in your contract. If the module is not already in your contract, Customer Support or Sales will let you know and will be happy to review the module with you to ensure your contract includes everything you need to use OpenClinica to its fullest!
