

2.2 Module Management

You can activate modules to add specific functionality to your study. Available modules are displayed on the **Modules** screen with a brief description of what each does. Click **Learn More** on any of the module cards for more information on a specific module.

To Activate Modules:

1. Click the **Settings**  icon on the **My Studies** screen, **Design** screen, or **Share** screen.
2. Determine which module(s) you would like to activate.
3. Click **Request Access** to begin the activation process.

The screenshot shows the OpenClinica interface for a study named "Super Forms (SF01)". The top navigation bar includes "Settings", "User Roles", and "Modules". The "Modules" tab is active. Three module cards are displayed:

- Participate:** Description: "With OpenClinica Participate, you have total control over when forms are available for each subject, and the data is captured in real time. The underlying audit trail offers objective evidence that the subjects completed the forms in the timeframe dictated by the protocol. [Learn more](#)". A red arrow points to the "Request Access" button.
- Insight:** Description: "Intelligent, visual reporting of all your data has arrived. OpenClinica's Insight module turns data into analytics and action. [Learn more](#)". A red arrow points to the "Request Access" button.
- Randomize:** Description: "OpenClinica's Randomize module allows you to conveniently randomize from within your OpenClinica study. Full configuration support and training provided. [Learn more](#)". A red arrow points to the "Request Access" button.

A red arrow also points to the "Learn more" link in the "Participate" module description.

Once you request access, the OpenClinica Customer Support team confirms that the module is included in your contract, and if it is, the module is enabled. If the module is not already in your contract, Customer Support or Sales will let you know and will be happy to review the module to see if contact you to ensure your contract includes everything you need to use OpenClinica to its fullest!
